

FREQUENTLY ASKED QUESTIONS

How Do I Disinfect My Oberon Hood?

The interior of the Arc Flash Hood can get soiled from perspiration and/or heavy usage. When more than one worker uses the hood, bacteria and other germs can get transmitted from one worker to another. In these situations, it is highly recommended that the hood be washed periodically according to the washing instructions on the hood's label. However, between washings, the interior of the hood can be disinfected using Lysol disinfectant spray. Spray the interior of the hood, and then wipe the shield window with a soft cloth.

Warning: Do not soak the hood fabric with the spray. After spraying the hood, allow it to dry before using.

For over 20 year, since Oberon created the first Arc Flash faceshields and clothing, the industry has looked to Oberon as the leader.
